NOTICE OF ERRATA

Global Water – Santa Cruz Water Company (“Santa Cruz”) and Global Water – Palo Verde Utilities Company (“Palo Verde”) (collectively, “Global Utilities”) respectfully submit this Notice of Errata to the Amended Application filed July 14, 2008. Certain errors were discovered in two of the legal descriptions. Accordingly, attached are revised legal descriptions as follows:

Revised Attachment H – Legal description of Southeast Service Area –
for areas sought jointly by Santa Cruz and Palo Verde.

Revised Attachment I – Legal description of Southeast Service Area –
for areas sought only by Palo Verde.

In addition, at the request of Staff, the Global Utilities have prepared an updated Engineering Memorandum and related attachments. The revised memorandum and related attachments are Revised Attachments E, F and G. Revised Attachments E, F and G are the same as those provided to Staff by email on October 27, 2008.

1 RESPECTFULLY SUBMITTED this 31st day of October, 2008.

MEMORANDUM

October 24, 2008

**Re: Update to the December 20, 2005 South East Service Area (SESA)
Water and Wastewater Services Memorandum**

This memorandum defines the service requirements of the South East Service Area (SESA) from the perspective of water supply and wastewater treatment. This memorandum will assume that the water treatment facilities will be newly constructed in the SESA and will be operated independently of existing Global Water – Santa Cruz Water Company (Santa Cruz) infrastructure. For wastewater, flows generated in the SESA can either be collected in new infrastructure and conveyed to existing Global Water – Palo Verde Utilities Company (Palo Verde) Campus 1 Water Reclamation Facility (WRF) or the flow will be treated at a newly constructed a 0.1 MGD WRF that will be designed in phases to keep pace with future growth.

The proposed SESA is somewhat unique in that the water and sewer certificated areas are not congruent – there are existing and pending water Certificates of Convenience and Necessity (CC&N) held by Arizona Water Company. Arizona Water Company does not provide wastewater services in these areas, and as a result many landowners have approached Global to provide these services. The proposed water CC&N, then, serves 13,217 acres, whereas the wastewater CC&N serves 26,730 acres. The proposed SESA Expansion Area has build-out capacity of 46,260 dwelling units for the water services, and 93,555 dwelling units for the wastewater services.

WATER SYSTEM

Exhibit 1 shows the requested Water CC&N area. Water supply for the SESA will be assured through the acquisition/annexation of former irrigation supply wells and their conversion to domestic supply wells. An application for a modification to Santa Cruz's Designation of Assured Water Supply (DAWS) is under preparation. A review of the available wells in the service area indicates that there are several high production wells available that would be suitable for the rehabilitation process.

As with all ground-water-based systems, the water quality varies by well and structure. Nitrate, arsenic and fluoride are expected to be discovered in varying concentrations as the evaluation of the water supplies is finalized. Santa Cruz maintains the following strategies with respect to water quality:

1. Identify and rehabilitate high quality wells in the service area. Clearly this represents the least costly (from a capital and operations point of view) option for the Santa Cruz.
2. Development of blending mechanisms and control strategies to blend high quality water with water that is of poorer quality to ensure compliance with the Safe Drinking Water Act and Arizona Administrative Code (AAC) R18-4.
3. Re-screen, deepen or otherwise modify existing wells to isolate areas of high contaminant concentrations or access higher quality water.
4. Provide a surface water treatment option (CAP water is available via the Maricopa-Stanfield Irrigation and Drainage District (MSIDD) canal system which passes many areas in the extension area).

5. Provide slipstream treatment processes which in conjunction with an effective blending plan will meet the requirements.
6. Provide full scale treatment of groundwater.

Santa Cruz remains confident that the water needs of the extension area may be met without treatment, as water quality generally improves moving eastward. Santa Cruz is, however, prepared to install, operate and maintain any treatment processes that may be required.

Well Evaluation Program

Global Water employs a three phased approach to the evaluation of wells:

1. Phase 1 – review of available ADWR and ADEQ data and physical assessment of wells;
2. Phase 2 – analytical sampling of flow rates and quality (depth specific sampling, spinner logs);
3. Phase 3 – rehabilitation. Installation of sanitary seal, re-screening, renewal of electrical control system, installation of SCADA control system, New Source Approval.

During Phase 2 of the evaluation program, a full suite of analytical data is taken from the water including:

Metals
Inorganics
Synthetic Organic Compounds
Volatile Organic Compounds
Nutrients
Bacteriological Analyses
Radiochemical constituents

The results of these analyses will determine the requirements for treatment of the groundwater. The preliminary report is included at Exhibit 2. Table 2 of that Report shows the water quality data available from the ADWR Database and includes a comparison to recent data from Santa Cruz existing potable wells.

For wells approximately 1,000 feet deep, the ranges of constituents of concern are:

Arsenic:	0.008 - 0.018 mg/L
Fluoride:	1.75 – 5.89 mg/L compared to 0.9 – 3.1 mg/L in the SESA wells
Nitrate:	2.7 – 3.6 mg/L
TDS:	682 – 1100 mg/L compared to 1235 - 1300 mg/L in the SESA wells

For wells approximately 800 feet deep, the ranges of constituents of concern are:

Arsenic:	0.008 - 0.010 mg/L
Fluoride:	0.67 – 1.37 mg/L compared to 0.5 – 1.5 mg/L in the SESA wells
Nitrate:	7.9 – 11.7 mg/L
TDS:	1233 – 1500 mg/L compared to 393 - 975 mg/L in the SESA wells

As further evaluation is conducted in Phase 2, water quality data for candidate wells in the SESA will be collected. On completion of the Phase 2 work, wells suitable for inclusion in the potable inventory will be re-habilitated.

Water Demand Requirements

The minimum acceptable flow standards that will be met are based on the following criteria:

1. Average Day Demand = 250 gallons per dwelling unit per day
2. Maximum Day Demand = 495 gallons per dwelling unit per day ($250 \times 1.8 + 10\%$ for potential line losses)
3. Peak Hour Demand = 0.58 GPM per dwelling unit ($1.7 \times$ Maximum Day Demand)
4. Fire Flow Requirement = 1,000 GPM for 4 hours

For the projected build-out scenario (46,260 dwelling units), the following are required:

Well Production:	$\approx 15,902$ GPM to satisfy Maximum Day Demand (Firm Capacity – that is, production capacity with largest well out of production)
Booster Pump Capacity:	$\approx 27,033$ GPM (Peak Hour Demand)

Identification of Potential Wells to Meet Demand

Clear Creek & Associates has been contracted to execute Santa Cruz's three phase evaluation of all the wells in the area to determine their suitability for conversion to potable water wells. Results of the first phase evaluation are included in Exhibit 2. From the wells recommended for further evaluation (Phase 2 of the program), over 17,000 gpm has been identified, more than the firm capacity requirement of 15,902 gpm. These wells will be evaluated with the three phase approach when additional water is required and/or when development occurs in the southern portion of the CC&N.

Fire Flow Requirements

In February 2003, the City of Maricopa adopted the 1997 Uniform Fire Code as the standard for fire flow. In paragraph 5.1 of Section 5 of that Standard, the minimum fire flow for one and two-family dwelling units (having a fire area not exceeding 3,600 square feet) is 1,000 gallons per minute at a residual pressure of 20 psi. Santa Cruz designs to this standard throughout its current service area and will employ the same criteria in the proposed SESA.

Storage Requirements

According to AAC Title 18, Chapter 5 Section 503:

R18-5-503. Storage Requirements

A. The minimum storage capacity for a CWS or a non-community water system that serves a residential population or a school shall be equal to the average daily demand during the peak month of the year. Storage capacity may be based on existing consumption and phased as the water system expands.

B. The minimum storage capacity for a multiple-well system for a CWS or a non-community water system that serves a residential population or a school may be reduced by the amount of the total daily production capacity minus the production from the largest producing well.

Santa Cruz also enforces a storage capacity requirement of the greater of either the AAC storage requirements presented above or 30% of Maximum Day Demand plus Fire Flow storage.

Historical data suggests the peak month for Santa Cruz in 2007 was June, with an average daily demand of 6.1 MG and 430 gpd/du. At 46,260 dwelling units, the peak month flow for the potable water system would be approximately 19.9 million gallons per day. With the firm well capacity being 15,902 GPM (22.9 MGD), requirement B of the AAC R18-5-503 does not control the storage volume requirement.

30% of Maximum Day Demand ($0.3 * 15,902 \text{ gpm}$) produces 6.9 MGal and for storage purposes, Santa Cruz adds a requirement for 1,000 GPM of fire flow for 4 hours, increasing the storage requirement by 0.24 MGal, for a total of 7.1 MGal. Santa Cruz standard configuration for water treatment plants is to provide 3.0 million gallons of storage which allows for substantial storage capacity and flexibility. It is anticipated that there will be a minimum of three water distribution centers each with 3 MGal of storage at build-out in the SESA.

30% Maximum Day Demand	Fire Flow Storage	Requirement	Minimum Provided
6.9 MGal	0.24 MGal	7.1 MGal	9.0 MGal

Distribution/Treatment Facilities

Santa Cruz requires that each section of land provide a 2 acre site for the provision of a water distribution/treatment site ("WDC"). This gives enormous flexibility to site additional treatment, storage and distribution infrastructure throughout the service area. The WDCs are planned for the setbacks of Campus 3 WRF located in Section 27, T5S R4E and Campus 7 WRF located in Section 23, T6S, R4E.

As growth proceeds, additional water distribution/treatment sites will be constructed or additional treatment capacity will be added to the original site, to provide redundancy and flexibility in the operation of the system. Such a system will also allow for consolidation of raw water supplies.

Depending on the quality achieved during the well evaluation program, the treatment included in these systems may be as little as chlorination, or could also include a blending control algorithm, or other treatment methodology to meet the Maximum Contaminant Levels (MCLs). The specifics of the treatment program will be determined based on the data collected during the well evaluations.

Phasing of Water Treatment and Distribution Systems

Santa Cruz plans to deploy infrastructure in a phased approach to meet demand.

WASTEWATER SYSTEMS

Exhibit 3 shows the requested Palo Verde Wastewater CC&N area, which represents 93,555 dwelling units at build-out. The requested Palo Verde SESA Wastewater CC&N area is approximately twice as large the requested Santa Cruz SESA Water CC&N due to the presence of the existing and pending water CC&N (Arizona Water Company).

Permitting Requirements

In order to provide treatment services, a number of regulatory agency permits must be received, including:

- CAAG 208 Water Quality Master Plan Consistency
- Aquifer Protection Permits
- AzPDES Surface Water Discharge Permits

208 Consistency

The SESA is encompassed by the approved Consolidated Palo Verde 208 amendment dated June 28, 2006.

Aquifer Protection Permit (APP)

Palo Verde will obtain the required Aquifer Protection Permits (APP) for the proposed facilities to service the extension area from ADEQ.

AzPDES Surface Water Discharge Permits

There are no planned discharges to "waters of the United States" per the approved 208 Plan and thus no AzPDES is required.

Treatment System

There are two options for treatment of initial flows, (1) pump-over to the existing Palo Verde Campus 1 WRF, or (2) construction of a 0.1 MGD phase (or another size as appropriate based on demand) of Campus 3 or Campus 7 WRF. The WRF would be designed in phases to keep pace with future growth.

If Option 1 is deemed most feasible, the lift station will be designed to be converted to the main influent pump station for the planned Palo Verde Campus #3 WRF located at the NW corner of Section 27, T5S R4E. Under this Option, wastewater from the SESA will be conveyed to the existing Palo Verde WRF Campus #1 facility via a 3.5 mile force main. This forcemain will pump the SESA flows from the influent lift station to a receiving manhole located at Peters & Nall Road and the Santa Cruz Wash. From this point the wastewater will be conveyed by gravity to the water reclamation facility.

Site and Design Plans

The land area under consideration drains to the northwest, and allows the service area to be sewered relatively easily, and without unnecessary lift stations. Palo Verde will deploy a treatment system capable of producing Class A+ water under a range of hydraulic and biologic loadings, scalable from a small, start-up facility to a full-scale municipal system.

The sites for the Campus 3 and 7 WRFs are approved in the Palo Verde Consolidated 208 and are located Section 27, T5S R4E and Section 23, T6S, R4E, respectively. The sites range from 30-40 acres typically, are or will be owned by Palo Verde, and as such are suitable to accommodate the 350' setbacks required around the entire WRF, and for the WRF's ultimate build-out capacity of 15 MGD (Campus 3) and 18 MGD (Campus 7). As with the existing and planned Palo Verde infrastructure, this facility will have the following features:

1. Production of A+ Reclaimed Water;
2. Compliant with BADCT requirements (R18-9-B201 *et seq*);
3. Totally enclosed process tanks;
4. Odor control facilities;
5. Aesthetic controls consistent with the surrounding architecture;
6. Noise abatement systems (equipment housed in purpose built masonry block buildings);
7. Peaking factor design 2.0.

As development proceeds, additional WRFs will be built in accordance with the regional master plan developed by Global, Pinal County and the Cities of Maricopa and Casa Grande. These additional facilities have been sited in the approved Consolidated 208 Water Quality Management Plan dated June 28, 2006.

Recycled Water Management

Global Water, Santa Cruz and Palo Verde are at the forefront of water reclamation activities in the state of Arizona. Corporately, this philosophy includes the highest and best use for all water sources, and a mandate to minimize the impact of development on non-renewable resources. This translates into employing the appropriate grade of water for the appropriate use. By deploying an extensive network of reclaimed water distribution lines, Palo Verde is able to deliver reclaimed water for a variety of ADEQ-approved uses.

Global Water Resources requires that all developments maximize the use of reclaimed water throughout their development areas. This includes the use of reclaimed water as the primary source of irrigation water, and for use in any recreational impoundments. Global intends to supply recycled water via bulk service sales to the areas served by Arizona Water Company for their furtherance to customers.

Costs

Infrastructure cost estimates are provided in the attached tables for years 1-5 and build-out.
